## **DETAILED ACTION**

### ***Election/Restrictions***

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-16, drawn to a modified polyoxyalkylene polyamine, classified in class 525, subclass 540+.
  - II. Claims 17 and 18, drawn to an epoxy composition, classified in class 525, subclass 523.
2. The inventions are distinct, each from the other because:
3. Inventions I and II are related as mutually exclusive species in an intermediate-final product relationship. Distinctness is proven for claims in this relationship if the intermediate product is useful to make other than the final product (MPEP § 806.04(b), 3rd paragraph), and the species are patentably distinct (MPEP § 806.04(h)). In the instant case, the intermediate product is deemed to be useful as reactant for the production of polycondensates or in and of itself without the presence of additional ingredients which would react in-situ to produce a mutually exclusive final product and the inventions are deemed patentably distinct since there is nothing on this record to show them to be obvious variants. Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions anticipated by the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Art Unit: 1711

4. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

5. During a telephone conversation with Mr. Mathew M. Jacob on March 4, 2005 a provisional election was made with traverse to prosecute the invention of group I, claims 1-16. Affirmation of this election must be made by applicant in replying to this Office action. Claims 17 and 18 are withdrawn from further consideration by the examiner, 37 CFR 1.142(b), as being drawn to a non-elected invention.

***Claim Rejections - 35 USC § 112***

6. Claims 1-16 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In claim 1, the term "obtainable" is indefinite.

In claims 3 and 4, it is unclear how "a" carbon number limits the claimed subject matter.

In claims 7-11, it is unclear how "a" molar number limits the claimed subject matter.

***Claim Rejections - 35 USC § 102/103***

7. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

Art Unit: 1711

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

8. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

9. Claims 1-4, 7-9, and 12-14 are rejected under 35 U.S.C. 102(b) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over EP 0499206 A2.

EP '206 discloses the modified polyoxyalkylene polyamines obtained by reacting a polyoxyalkylene polyamine, reading on the presently claimed polyoxyalkylene polyamine, with an ethylenically unsaturated monomer, reading on the presently claimed alkenyl group-containing compound. See the various formulations of examples 7-10 and the use of Jeffamine T-403.

The disclosure of the reference meets the requirements of the above-rejected claims both in terms of the types of materials added and their contents.. Accordingly, since the materials of the reference are the same as applicants, it is reasonably believed that they would inherently meet all the characteristics of the present claims. The onus is shifted to applicants to establish that the product of the present claim is not the same as or obvious as that set forth by the reference.
